

INFORMED CONSENT FORM

Our names are Sydney Ainsworth, Elizabeth Rodriguez, and Sri Ramani Thungapati, and we are students at California State University, Chico, Department of Computer Science. You are invited to participate in a research study about an application designed to monitor blood sugar levels transmitted from a device to the application, and monitor the device itself.

If you volunteer, you will be asked to perform a series of tasks directly related to the functionality of the application, which will take about 30 minutes.

If you agree to participate, you can stop at any time. This study may expose you to minor risks, but they are not expected to be any greater than risks you experience in daily life. The benefit to this research is to help us improve the user interface of the SmartInsulin application.

The results will be part of a class report. You will not be identified in our results. We will protect your identity by: (1) grouping responses/using pseudonyms, (2) storing collected information in a protected location, and (3) removing identifiers as early as possible. Information that can identify you will be deleted or removed from the data after a period of (duration). We will destroy the de-identified data at the end of this semester.

If you have any questions about the research, please contact us at slainsworth@csuchico.edu, sthungapati@csuchico.edu, eerodriguez3@csuchico.edu, or our class instructor, Dr. Kevin Buffardi.

Your participation implies that you have read and understand this information and that you may stop at any time without penalty.
